

APS INNOVATION FUND

Pre-Proposals for the 2022 APS Innovation Fund are now being accepted!

Open to any current APS member, the Innovation Fund provides grants to collaborative projects that advance interests important to the physics community and align with the [APS Strategic Plan](#). Proposals should not address traditional physics research problems, or represent continuations of existing efforts.

Innovation Fund proposals could include, but are not limited to:

- A task force, workshop, or study to explore a critical issue facing the physics community;
- An innovative public engagement experiment;
- A new approach to science advocacy;
- A means to advance key APS member interests including diversity, careers, education, or member services; or
- A path to enable APS to have greater engagement of physicists in industry or around the world.

APS typically awards several grants each year with a maximum award of up to \$200,000 over two years (dependent on satisfactory progress).

Pre-proposals are due **March 21**. Projects selected to advance to the full proposal stage will be asked to submit a more detailed proposal with a due date in June 2022.

An **Innovation Fund Q&A Webinar** will be held for members to ask questions of Jim Gates (2022 Innovation Fund Committee co-chair, 2021 APS President), Monica Plisch (2022 Innovation Fund Committee co-chair and APS Programs Director), and other APS staff to learn more about the Fund and how to submit a competitive pre-proposal on **February 23, 2:00 - 3:00 p.m. ET**.

While we will answer any questions that arise during the webinar, you can also submit questions in advance on the registration form. If you cannot attend the webinar, you can email us at if@aps.org.
